ENGINEERING BEYOND IMAGINATION

DEPLOYABLE RESPONSE AND GRAPHIC OPERATIONS NETWORK (DRAGON)

WWW.DASNETCORP.COM

PROJECT:

Deployable Response and Graphic Operations Network (DRAGON)

CLIENT NEED:

The 20th Support Command Operations Center, located in the Edgewood Area of Aberdeen Proving Ground, Maryland required the integration, operation and maintenance personnel support of a forward deployed Information Technology System that would be a critical element in any response during a Chemical, Biological, Radiological, Nuclear and High Yield Explosive (CBRNE) event.

SOLUTION:

- *DasNet operated and maintained the two complete Deployable Response and Graphic Operations Networks (DRAGON) teams, when simultaneous dual missions occurred, and provided rear support in the 20th Support Command Operations Center, including updating databases, imagery and mapping.*
- *DasNet operated and maintained Geographical Information System (GIS) Applications, including tables and databases, ERDAS Imagine, ESRI ArcView and ArcIMS that displayed in ArcIMS. These databases provided critical overlay information to first responders and provided valuable information to follow-on planners.*
- *DasNet provided systems administrators for the Secure Information Protocol Network (SIPRNET) when not deployed, and when deployed, these administrators supported a deployable SIPRNET Hub utilizing connectivity through the Deployable Communications System, to include Information Network Encryption (INE) units and work stations.*
- *DasNet provided critical emergency service during high-visibility events as well as on-call 24/7/365.*

RESULT:

DasNet provided a vital service to the US Army in supplying a specialized team of professionals to support this Deployable Response and Graphical Operations Network unit in support of potential CBRNE events.
